- > Remote Administrative Service Tasks controlled through the Print Manager Plus Admin Console.
- > Print Manager Plus Quotas, Restrictions, and Rules all apply.
- > Pricing by Workstation.

Any organization small or large needs Print Management software. Most organizations use different printer brands and configurations throughout their network, and because of this we give you a way to audit and manage any network setup without the hassle of having to change it. We support Workgroups, Single Server, and Enterprise configurations, that may use print servers, or are 100% direct IP, or a mix of both. The Workstation Agent allows you to manage printing for locally attached workstation printers, Direct IP printing, and Workgroups.

This application-based product can be installed on a workstation and allows the Administrator to Monitor, Quota, and Restrict printing on the locally attached printer and any users printing to that workstation connected printer.

This tool is great for companies that have locally attached workstations that they cannot monitor or Large Format Printers that they do not want to send large print jobs over the network to, through their print server.

Once the product is installed on the workstation the Agent will appear under the Servers Tab in Print Manager Plus. Also all printers locally attached to that workstation will appear under the Printers Tab. The local service can be Stopped, Started, and Restarted remotely. The service can also be updated remotely using eUpdate.

All Quotas and Restrictions set through Print Manager Plus all apply to users printing from or through these

workstations. Being able to manage and audit all printers, regardless of the network configuration makes Print Manager Plus the most versatile print management product on the market.

For a fast and easy implementation we will walk you through the setup, call now for a quick consultation with one of our experts.

At Print Manager, we believe in great technology. We believe great technology can and should delight people. And we believe in going the extra mile for our users and making the perfect product. We hate waste and the negative effects on our environment, which comes from a printer industry geared to sell you more paper, more ink and more printers. They are not incented to give you control over this waste, but we are. We believe that great technology can put IT in control of waste and let you get on with your job.
